OTHER DETAILS OF BUSINESS.

During the year a total of 70,373 applications for patents, reissues of patents, and designs and 165,533 amendments in pending applications were filed. This represents a decrease of 660 in the number of applications and a decrease of 9,411 in the number of amendments filed.

The fees received by mail and express amounted to \$1,316,145.31, and the fees paid by hand to the Financial Clerk amounted to \$876,762.81. The number of letters indexed and filed, constituting the general correspondence of the Office, was 277,485. In addition to this 26,015 letters of inquiry were returned with circulars of information answering the questions propounded. The number of parcels received by registered mail was 11,968, and the number of parcels by express was 3,474.

During the year 10,304 applications were forfeited by reason of failure to pay the final fee within the time prescribed by section 4885, Revised Statutes, and 1,628 applications previously allowed and forfeited were renewed. Since March 3, 1861, about 247,590 forfeited cases have become abandoned.

In the Drafting Division 993 drawings were made for inventors, who paid \$3,494 therefor, and 6,861 drawings previously filed were corrected upon request by the inventors, for which the Office received \$5,519.35. Ten tracings were made at a cost of \$18.50. The total fees received for work by the Drafting Division were \$9,031.85. In addition to this 10,150 corrections in drawings were made without cost to the inventors.

In the Assignment Division 28,097 deeds, transferring the titles to patents, etc., and containing 12,740,450 words, averaging 455 words per deed, were recorded. For this work the Office received \$48,034.01. In addition to this the Assignment Division prepared 1,633 abstracts of title and 3,210 briefs, for which fees amounting to \$2,227.50 were paid. The total earnings of the Assignment Division were \$50,261.51.

Type-written copies of records aggregating 27,549,700 words were written, and other copies containing 2,554,600 words, made by outsiders, were compared and certified by the Office. For the whole of this work the Office received \$30,104.30. For the certificates attached to certain of these copies the Office received \$1,249.25, a total of \$31,353.55. The Office supplied 1,785 certified printed copies of patents, 2,637 copies of trade-marks, 93 copies of prints and labels, and 58 copies of design patents, at eighty cents each.

Inventors and attorneys were furnished with 54,835 photographic copies of drawings 8 by 12½ at fifteen cents each and 3,433 photographic copies of drawings 10 by 15 at twenty-five cents each; also 54,496 photostat copies at fifteen cents each and 42,979 photostat copies at twenty-five cents each. The amounts received for these photographic and photostat copies were \$9,083.50 and \$18,929.15, respectively. The expenditures during the year for supplies for the photostat-machine were \$5,524.16.

Printed copies of specifications and drawings of patents to the number of 2,511,082 were sold at five cents each, bringing to this Office on this account \$125,554.10. For 1,277,184 copies sold to libraries the Office received \$1,612.50. The total received from the sale of copies of patents was \$127,166.50. Copies to the number of 1,097,555 were shipped to foreign Governments, and 142,640 copies were drawn for Office use. The total number of printed copies of patents distributed during the year was 5,354,136.

CLASSIFICATION OF PATENTS.

The Classification Division, which was established in December, 1898, a little over nineteen years ago, for the purpose of revising the classification of patents according to some more uniform and comprehensive system or plan, has completed the revision of some one hundred and sixty main classes, and has yet to revise one hundred and twenty-two main classes.

Owing to the extremely technical nature of the work, made more difficult by the fact that the same or similar machines and processes are capable of use and often are actually used in wholly differ-

ent arts, the reclassification of the million and a quarter patents granted in this country has been exceedingly slow. In order to expedite the work and improve the system, a change in the methods employed has been recently adopted. Previously the revision was carried on entirely in the Classification Division by a group of Assistant Examiners, under the supervision of the chief of the division. By the present plan the revision is being carried on in the various examining divisions. Each Principal Examiner, with the aid of one of his Assistant Examiners, is required to revise the class or classes which are in his own division and with which he is presumed to be familiar, the work in each examining division being under the general supervision of a skilled classifier, who is under the supervision of the chief of the Classification Division.

Of the total forty-five divisions in the Office all the classes in nine have been revised; in thirty-three one or more of the classes have already been revised, while revision has been taken up and is now being carried on under the new system in twenty-six divisions.

It is hoped that since the Principal Examiners are familiar with the patents comprising the classes in their respective divisions the present system will greatly expedite the work of revision and simultaneously inaugurate a continuing system of classification in each of the examining divisions. This is necessary if classification is to be kept up to date.

PATENT INTERFERENCES.

Beginning about the first of the year 1914 the practice was adopted of submitting to one of the Law Examiners all prospective interferences before taking other steps looking to the declaration thereof. This practice has from the first resulted in the elimination of nearly one-third of the interferences which would presumably have been otherwise declared and has unified throughout the Office the standards whereby conclusions are reached as to the propriety of instituting interferences.

Beginning in the latter part of the year 1914, in cases where the difference of a year was found to exist between the filing dates of pending applications found to disclose and claim common patentable subject-matter, the practice was started of inquiring of the junior applicant his claimed dates of conception, and when the response disclosed a date of invention subsequent to the senior party's filing date the junior party was notified that no interference would be declared, but that the senior application would be allowed and when patented cited as a reference against the junior party's application. That procedure was found to result in a material reduction in the number of interferences declared, and especially of that type which when declared degenerated into what practically amounted to mere opposition proceedings. A mandamus resulting in the suspension of this practice was issued from the Supreme Court of the District of Columbia on April 29, 1915, in the case of *United*

States, ex rel. The National Cash Register Company, petitioner, v. Thomas Ewing, Commissioner of Patents, respondent. (At law, No. 57,970.) The judgment of the court in that case was, however, on July 1, 1915, vacated on motion of the petitioner. Thereafter the new practice was resumed and continued until a mandamus was issued, January 26, 1916, from the same court in the case of *United States, ex rel. The Fowler Car Company, petitioner, v. Thomas Ewing, Commissioner of Patents, respondent.* (At law, No. 58,768.) Upon appeal this decision was affirmed by the Court of Appeals of the District of Columbia, (45 App. D. C., 185; 226 O. G., 700,) and thereafter the matter was carried by writ of certiorari to the Supreme Court of the United States. That Court in a decision reported at 244 U. S., 1, (238 O. G., 983,) reversed the judgment of the lower court and directed that the petition be dismissed. Thereupon Rule 93 of the Rules of Practice was amended, the practice was resumed, and has since been followed. For some time the rule of resorting to this practice only when a year or more intervened between the filing dates of junior and senior parties has been discontinued, and junior parties have been requested to furnish information as to their dates of conception whenever it has been thought likely that responses would be obtained which would show that an interference need not be declared.

In general the practice works well, and its advantages are now widely recognized. The greatest difficulty is met with in instances where a junior party's application, ready for allowance, must be temporarily withheld until a senior party's application can be put in condition for allowance and patented. In such instances the Office makes special effort to obtain the issuance of the senior party's patent promptly. If undue delay of the junior party's application appears to be inevitable, an interference is declared.

During the year a total of 1,451 interference proposals were reviewed by the Law Examiner. Of these 678, or 47 per cent., were approved as submitted; 325, or 22 per cent., were approved after modification, and 448, or 31 per cent., were disapproved. Included in the proposals approved were 73 instances where new parties were added to existing interferences. A total of 930 new interferences were declared.

REQUIREMENT OF DIVISION.

There were 71,006 new applications for patents acted on during the year, and the number of first requirements of division was 5,806, or 1 in 12.23 new cases. This means that 8.18 per cent. of the cases filed required to be divided, as compared with 8.33 per cent. in 1916 and 8.98 per cent. in 1915.

It is probable that some further reduction in the percentage of cases required to be divided could be effected by reference to a Law Examiner of all first requirements. It would, however, be impossible for one man to look into so many cases.

Much of the time of the Law Examiner assigned to the question of division is now given to consideration, with the Examiner, of first requirements in cases where the propriety of the requirement is regarded as doubtful. Extension of this practice is desirable so far as possible, since the institution of the requirement of division followed by its subsequent disapproval is a waste of time for both the Office and the applicant.

Formal approval or disapproval of the final requirement of division, as required by rule 42, was given in 630 applications during this year, as compared with 793 in 1916. In these cases approval was given in 378, and in 252 (40 per cent.) the requirement was disapproved wholly or in part.

The decreased number of final requirements submitted is due, it is thought, to an increased care in making the requirements precise and exact in form and corresponding to distinct substantive inventions.

Trivial requirements, of which some instances formerly were found, have substantially disappeared. Requirements founded largely on different classification, but in which both groups of claims are based so largely upon common structure as to make a structural line difficult or impossible to draw, are of frequent occurrence. Lines of classification are defined, and by their definition are somewhat inflexible. Where claims to an invention go into one class by definition and other claims into another, but by the common purpose and result of structure dominant in both sets of claims are closely related and contribute to a single result, division is usually not desirable.

APPEALS TO THE COURT.

The appeals taken from the decisions of the Commissioner to the Court of Appeals of the District of Columbia and adjudicated during the calendar year are as follows:

Ex parte patent cases.....	16
Inter partes patent cases.....	21
Ex parte trade-mark cases.....	3
Inter partes trade-mark cases.....	18
Total	58

The Commissioner's decision was affirmed in thirty-two cases, reversed in eighteen cases, and eight cases were dismissed.

SCIENTIFIC LIBRARY.

During the year a special appropriation of \$20,000 was made by Congress for binding foreign patents in classified order. This appropriation is sufficient to cover the cost of binding sets of German, Austrian, and Swiss patents.

One set of German patents, beginning with No. 65,500 and ending with No. 258,300, the last received, has been arranged in 1,417 volumes and is now in process of binding. About sixty-five per cent. of these volumes have been bound and returned to the library to date, and it is expected to have them all back within two months.

It is estimated that there will be about seven hundred volumes of the Austrian and Swiss patents,

of which there are complete sets. The cost of binding these sets will use up about the whole of this appropriation. The work of preparing these volumes for binding is well under way, and it is expected that in about eight weeks they will all be at the bindery. This will give sufficient time to complete this work within the fiscal year.

During the present fiscal year there have also been bound, out of the regular appropriation for that purpose, 250 volumes of French patents in classified order.

The library has recently procured from the Library of Congress a depositary set of printed cards for a subject-and-author catalogue. These cards are descriptive of books treating of the pure and applied sciences and number some two hundred thousand. The work of typing the headings on these cards and arranging them in alphabetical order has been completed within the last year, so that the catalogue is now available for use by searchers. It is kept up to date by the entry of new cards, which are continually being received gratis from the Library of Congress, and is of great value to searchers by indicating to them the standard works in any particular art or branch of science.

Through the courtesy of the Norwegian and Indian patent offices the library has been fortunate during the past year in procuring complete sets of the patents issued by these offices from the beginning. The Norwegian is for the Examiners' files, the Indian for the original files kept in the library.

PRIMARY EXAMINERS' ADVISORY COMMITTEE (WAR).

Under the provisions of the act of October 6, 1917, (Public, No. 80,) authorizing the Commissioner of Patents to withhold the grant of a patent whenever the subject-matter of the invention in his opinion, if published or otherwise disclosed, might be detrimental to the public safety, convey useful information to or assist the enemy, there has been established a Primary Examiners' Advisory Committee of seven Primary Examiners from those divisions examining most of the war inventions to determine what patents should be withheld. Some five hundred cases, to date, have been submitted to the committee, and of this number it has ordered that 421 be withheld from issue.

Lists of these applications have been sent to the Federal Trade Commission, that their order of like import could be sent, and, further, to give notice of the penalty provided in section 10 (i) of the Trading with the Enemy Act (Public, No. 91) for any violations of the order prohibiting disclosure.

These acts work hardships on those inventors who need their patents to interest capital in the development to practical form of their inventions, as well as those whose inventions are being infringed by individuals other than the Government.

LEGISLATION.

I have prepared and sent to the Patent Committees in both the House and Senate copies of proposed bills providing, first, for the issuance of *subpœna duces tecum* in interference cases; second, extending the time nine months in which our allies may file applications for patent in this country after having filed abroad, (our enemies have already been granted that privilege under the Trading with the Enemy Act;) third, a reversal of fees in patent cases—namely, twenty dollars for the filing fee and fifteen dollars for the final fee—making these fees more nearly in accordance with what they were originally intended to cover, the filing fee being about the cost of the examination and the final fee that of printing the patent, the average cost of printing patents being something over twelve dollars, and, fourth, a bill to require clerks of United States courts to send to the Patent Office all decrees of the courts in patent cases.

BUILDING.

The entire Patent Office Building has been at last turned over to the use of the Patent Office alone, the office of the Secretary of the Interior having been moved to the new Interior Department Building, and temporarily the force is comfortably quartered; but this will only be temporary. Within the last twenty years the force has practically doubled in size, and it may reasonably be expected to repeat this growth in the next twenty years, for the field of invention is infinite. Hence there is just as much to invent as there ever was. Every pioneer invention opens a new art, giving rise to numerous improvements. Edison's phonograph patent has been followed by hundreds of improvement patents that would never have existed had not the phonograph been invented, and as inventors and inventions increase the Office force must accordingly increase.

We are planning to utilize eventually every foot of space available for storage or other purposes, for the building cannot well be enlarged, especially if its present architectural beauty is to be preserved. It is now one of the most beautiful, if not the most pleasing in appearance, of all the Government buildings, and it is appropriately so, being the headquarters of a system the sole purpose of which is to add to the sum of human comforts, not by taking away anything from anybody, but by encouraging inventive genius to produce new and better things.

PERSONNEL.

An unusual number of changes in the personnel of the examining corps has marked the year just closed.

Out of a total membership of 419 at present constituting said corps vacancies have been caused as follows:

By death:	
Principal Examiners.....	2
First Assistant Examiner.....	1
Fourth Assistant Examiner.....	1
By resignation:	
Law Examiner.....	1
First Assistant Examiners.....	7
Second Assistant Examiners.....	18
Third Assistant Examiners.....	30
Fourth Assistant Examiners.....	17
Total	77

Of those resigning the following have done so to enter the Army or Navy:

First Assistant Examiners.....	2
Second Assistant Examiners.....	8
Third Assistant Examiners.....	10
Fourth Assistant Examiners.....	11

On October 6, 1917, the corps was enlarged through act of Congress by adding thereto one Examiner of Interferences, two Principal Examiners, and four Assistant Examiners in each grade.

Some difficulty has been experienced in filling the vacancies created by these additions and the many resignations. Resignations from the corps are only accepted when the Examiner is drafted or resigns to enter the Army or Navy. The Civil Service Commission held four examinations during the year, resulting in the certification of fifty-four men and one woman as eligibles for appointment. Several of these, however, were unwilling or unable to accept appointment, and it has been found necessary to make a number of temporary appointments to the position of fourth Assistant Examiner. Thirty-five such appointments were made during the year, and in each instance the qualifications of the appointee were inquired into carefully and his probable ability to pass the civil-service examination ascertained before appointment. It has been the intention in making temporary appointments to keep up the standard of scholarship and ability established and maintained through the regular civil-service examination.

On December 31, 1917, there were twenty-five temporary appointees at work in the Office, all of whom expect to take the next civil-service examination to gain a permanent appointment.

Respectfully submitted.

J. T. NEWTON,
Commissioner of Patents.
